# CTA01

## Cable tail adapter for PD900, PD910, PD920, PD950DC, PD950NW

### DESCRIPTION

The CTA01 is a cable tail adapter, for PD900, PD910, PD920, PD950DC, PD950NW. It converts the camera into a cable tail model. It also includes an anti-drop protection inside. NPT 1.5" tapered for use with third party mounts.

### FEATURES

- Aluminum
- NPT 1.5" tapered
- 3-opening gland

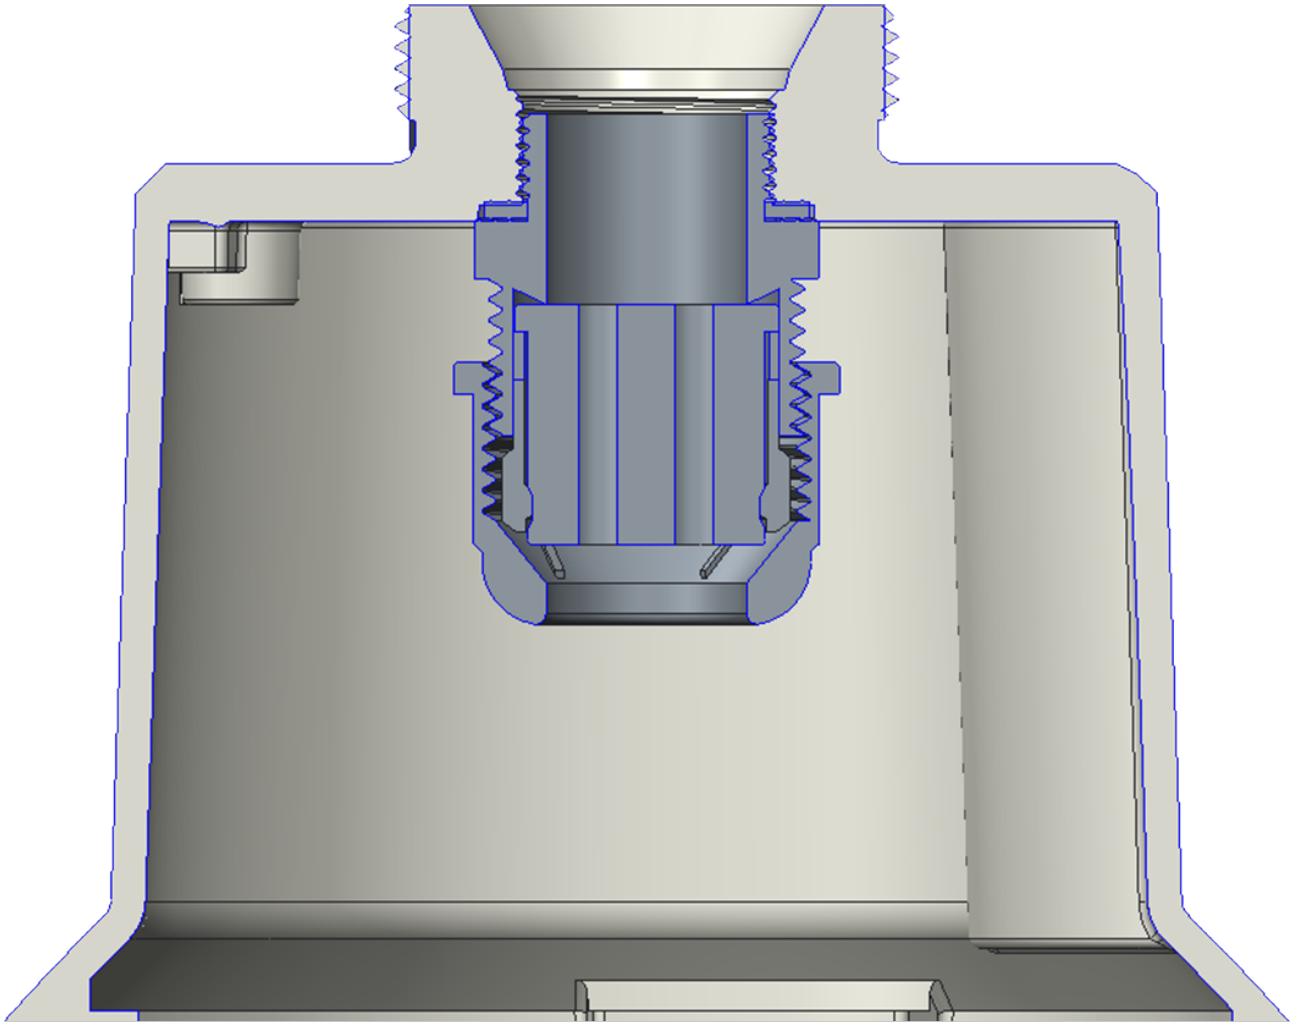

## Features

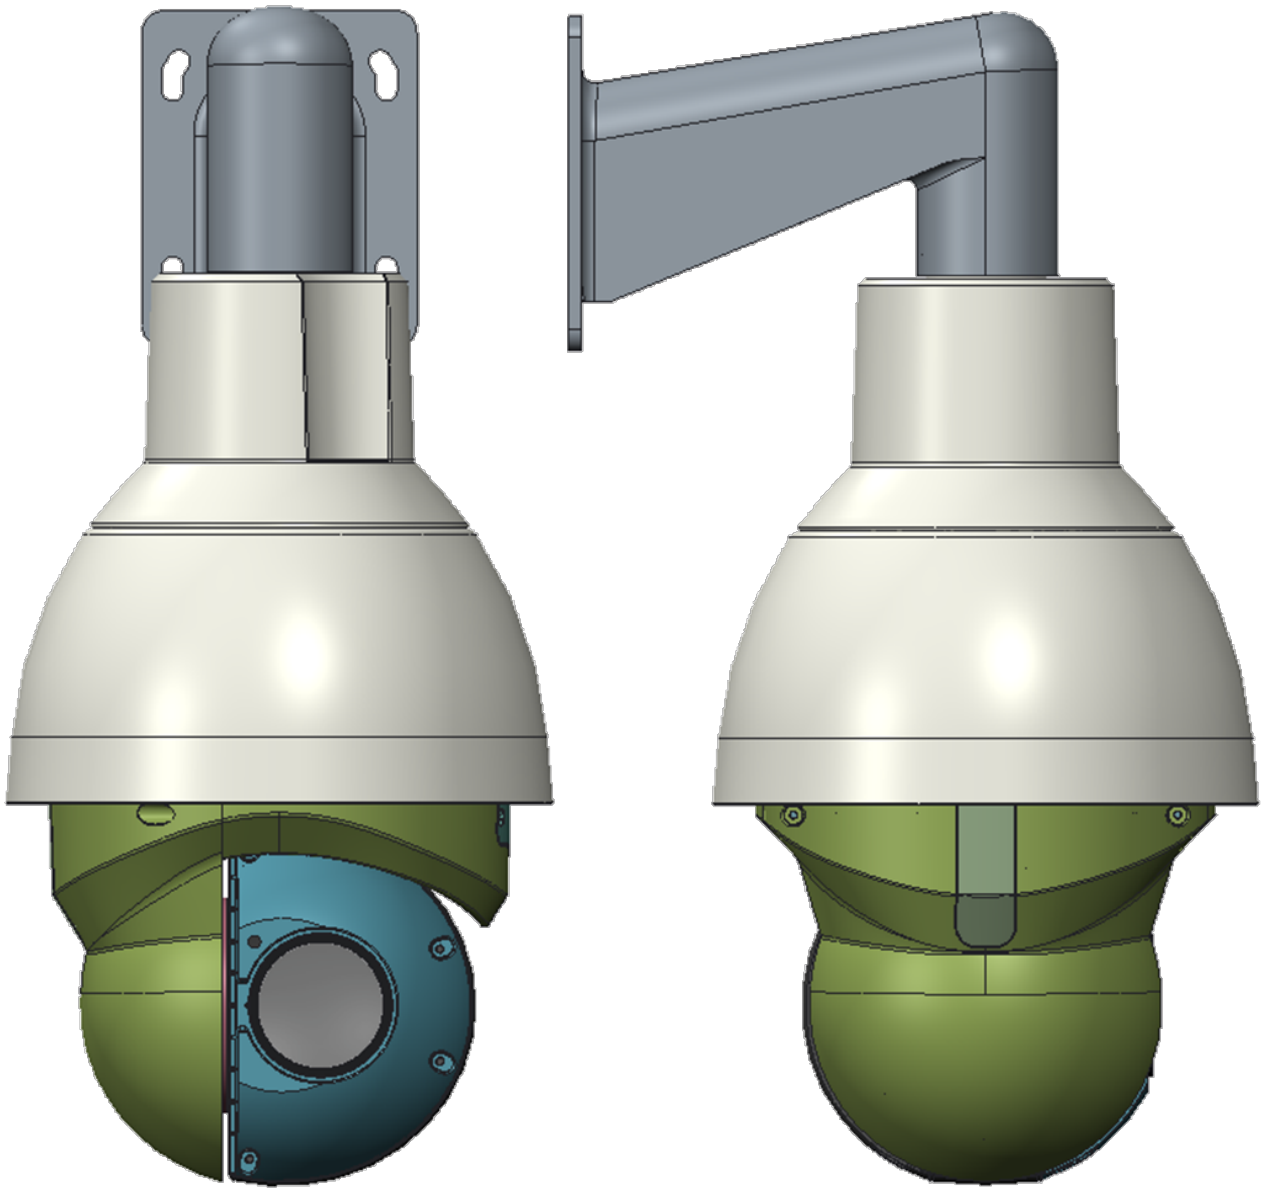

The CTA01 is a cable tail adapter. It essentially converts the camera into a model that connects using a cable tail rather than the standard connection terminals on the inside of the camera. The CTA01 will convert the camera into an intrinsically waterproof one, such that no special installation attention is required for the mounting, particularly to third party mounts. The used cable or cables are sealed by means of a sturdy gland on top of the CTA01, allowing up to three cables to be used.

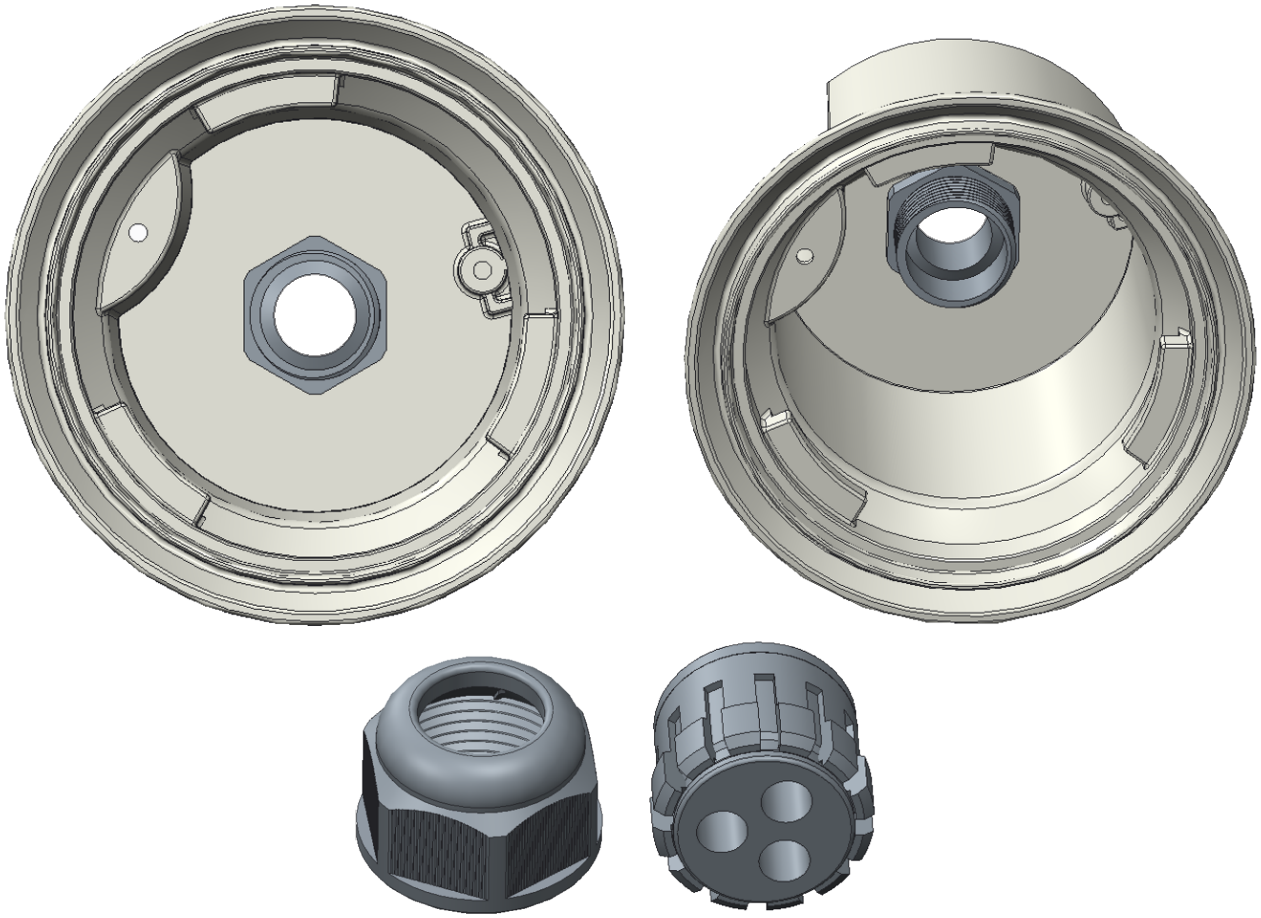

Inside the CTA01, an anti-drop protection cable is pre-assembled. This allows for easy and safe installation of the camera.
